Airline Crash – Last 20 years

Airline vs Automobile

When we compare the data compiled by the National Highway Traffic Safety Administration vs the statistical data from Bureau of Aircraft Accident Archive, we can clearly see that Air Crashes are very low when compared to the Automobile Crashes. The highest number in Airline crashes was 266 back in 1995 and the number saw the lowest of 102 in 2017. Whereas the numbers in the Automobile department has in the range of thirty thousand almost every year. That is a huge difference in the numbers between the Airline and Automobile incidents.

742

Average annual fatalities due to airline travel (from 2010 - 2020)

34,903

Average annual fatalities due to road/auto travel (from 2010 - 2018)
